ABOUT

Backend Software / Data Platform Engineer with 4+ years of experience building scalable, event-driven distributed systems and business-critical services using Java, Spring Boot, Kafka, Python, SQL and MongoDB. Experienced in data integration, data processing pipelines, platform modernization, automation and production support within financial-services and trading environments. End-to-end ownership across development, testing, deployment, monitoring and incident resolution.

SKILLS

Languages :	Core Java, Python, SQL, C++
Backend & Data :	API Design(REST/gRPC), Distributed systems, Data Integration, Spring Boot, Data Processing Pipelines, Relational Databases, Sybase, NoSQL
Messaging & Streaming :	Kafka , MQ (Messaging Queue), Publish Subscribe, Event-Driven Architecture
DevOps & Reliability:	Docker, Linux/Unix, Service Observability, Git, Splunk, Grafana, CI/CD pipelines
Core Concepts :	System Design, Microservices, Root-Cause Analysis, Technical Reviews
Leadership :	Mentoring, Stakeholder Management, Requirement Gathering Cross-functional Collaboration

EXPERIENCE

Morgan Stanley

Software Engineer 2 (Associate)

March 2025 - present

- Develop Java and Spring Boot microservices supporting a distributed data platform and business-critical trading workflows associated with transactions **valued at over \$35B**.
- Architected and implemented a Cross-Reference component **automating integration** between external sources including Bloomberg and Refinitiv and internal entities through stable identifier generation and entity resolution.
- Designed an automated **duplicate detection and resolution workflow** using Java, Kafka and MongoDB, eliminating manual processing for approximately **50 duplicate-resolution requests per month**.
- Modernized legacy Sybase workflows, stored procedures and scheduled jobs through Spring Boot services, Kafka-based event processing and MongoDB-backed persistence.
- Own deployment, release validation, monitoring, incident diagnosis and **root-cause analysis** for business-critical distributed services.
- Mentor junior engineers through code reviews, engineering standards and development best practices.

Senior Software Engineer (Accolite Digital)

January 2022 - March 2025

- Enhanced Java backend applications supporting **10+ business-critical downstream platforms** across trading, risk and post-trade workflows.
- Led end-to-end delivery of a major external integration migration, covering impact analysis, application enhancements, testing, deployment, production rollout and post-release validation.
- Served as India engineering point of contact for **15+ onboarding and integration initiatives** across APAC, EMEA and North America.
- Investigated and resolved production issues across distributed systems using Linux, Splunk and Grafana, driving root-cause analysis, service recovery and long-term corrective actions.
- Recognized by department leadership for rapid diagnosis and resolution of a critical production incident impacting business operations.

EDUCATION

Bachelor of Engineering in Computer Science

Shri Ramdeobaba College of Engineering and Management

2018-2022

CGPA : 8.2
