ABOUT

Backend Software Engineer with 4+ years of experience modernising legacy platforms, building event-driven services and operating business-critical **distributed systems**. Strong hands-on experience with **Java, Spring Boot, Kafka, SQL MongoDB and production engineering**, with ownership across requirements analysis, backend development, deployment, incident response and post-release support. Experienced in delivering **complex system integrations** and platform migrations in globally distributed engineering environments.

SKILLS

Languages :	Java, Python, SQL , C++
Backend :	Spring Boot, REST APIs, Microservices , Kafka, Multithreading, Concurrent Programming.
Databases :	MongoDB, MSSQL, Sybase .
Tools & Platforms :	Docker, Linux/Unix , Gradle, Git, Splunk, Grafana, CI/CD.
Core Concepts :	Distributed Systems, Event-Driven Architecture, System Design , Production Engineering.

EXPERIENCE

Morgan Stanley — Software Engineer II (Associate)

March 2025 - present

- Develop and maintain **Java/Spring Boot microservices** on a modern distributed data platform responsible for ingesting, processing and distributing business-critical reference data across downstream systems.
- Delivered the Cross-Reference component, a platform modernisation initiative, enabling external records to be identified and mapped against internal reference entities using stable identifier generation and attribute-based matching.
- Designed and implemented an automated duplicate-detection and resolution workflow using Java, Kafka and MongoDB, reducing manual operational intervention and improving data consistency for downstream consumers.
- Contributed to migration of legacy database-centric workflows built around Sybase, stored procedures and scheduled jobs into an **event-driven architecture using Kafka, MongoDB, MSSQL** and Spring Boot services.
- Partner with **business stakeholders** to analyse requirements, design backend solutions and drive delivery from development through production rollout.
- Own release validation, **production deployments**, monitoring, incident diagnosis, **root-cause analysis** and operational support for highly available distributed services.

Morgan Stanley via Accolite Digital — Senior Software Engineer

January 2022 - March 2025

- Enhanced **Java backend applications** responsible for ingestion, transformation and distribution of real-time data consumed by multiple downstream platforms across trading, risk, clearing and enterprise workflows.
- Independently **led end-to-end delivery** of a major external integration migration early in career, **owning impact analysis, application changes**, testing, deployment, production rollout and post-release validation.
- Served as **India engineering point of contact** for onboarding new external data sources and platform integrations across APAC, EMEA and North American regions.
- Migrated application build infrastructure from ivy to Gradle, simplifying dependency management and improving long-term maintainability of legacy Java services.
- Investigated and resolved production issues across distributed systems using **Linux, Splunk and Grafana**, driving root-cause analysis, service recovery and long-term corrective actions.
- Participated in global on-call supporting business-critical applications operating across international business hours.
- Recognised by Organization leadership for **rapid diagnosis and resolution** of a critical production incident impacting business operations.

EDUCATION

Bachelor of Computer Science : Shri Ramdeobaba College of Engineering and Management

2018-2022
