ABOUT

Software Engineer with 4+ years of experience building, modernizing and supporting mission-critical market data platforms powering Electronic Trading and Risk systems at Morgan Stanley. Experienced in Java, Spring Boot, SQL, Kafka and distributed systems, with hands-on ownership of backend services, production engineering, event-driven architectures and large-scale data pipelines processing millions of market data updates from global exchanges and financial data vendors.

SKILLS

Programming Languages : Java, Python, SQL, C++.
Backend & Systems : Microservices, Multithreading, Distributed systems, REST API, Kafka, Spring Boot.
Databases & Tools : JIRA, CI/CD, MongoDB (6TB+), Sybase, MSSQL.
Cloud & DevOps : Docker, Linux/Unix, Git, CI/CD, Gradle, Grafana, Splunk
Core CS : Data Structures, Algorithms, OOP, System Design, Concurrency.

EXPERIENCE

Morgan Stanley — Electronic Trading : Market Data Platform *Mumbai, Maharashtra*
Software Engineer II (Associate) March 2025 - present

- Develop Java/Spring Boot backend services on Morgan Stanley's next-generation market data platform supporting electronic trading and enterprise risk systems.
- **Lead migration of the TickSize enrichment** pipeline from a legacy Sybase-based workflow to a modern event-driven architecture using **Kafka, MongoDB, MSSQL and Medallion Architecture**, improving maintainability and enabling future platform scalability.
- Designed and implemented an automated duplicate product resolution workflow using **Java, Kafka and MongoDB**, eliminating manual operational intervention while ensuring consistent downstream product enrichment.
- Built business logic for backend services processing **30M+ events/day**, reducing **p95 latency by 60%** through asynchronous processing and connection pool optimization.
- Partner with traders, quants and global engineering teams to onboard new exchanges and market data use cases.
- Own production deployments, release validation, monitoring, root cause analysis and incident resolution for business-critical trading services.
- Received the **Morgan Stanley Excellence Award** for rapidly diagnosing and resolving a production issue impacting **ASX trading**, restoring platform availability before the next trading session.

Senior Software Engineer (Contract via Accolite Digital) January 2022 - March 2025

- Enhanced Java-based market data applications ingesting **2M+ vendor messages/day** from Bloomberg, Reuters, MQ feeds and **68+ global exchanges**, serving **15+ downstream** trading and risk systems.
- Migrated Java application from **Ivy to Gradle**, improving dependency management and simplifying build maintenance.
- Investigated and resolved production incidents across **S1–S4** priorities using Linux, Splunk and Grafana, driving end-to-end root cause analysis and permanent fixes.
- Collaborated directly with traders, quants, Market Data teams and global engineering stakeholders throughout requirement analysis, development, testing, deployment and production support.
- Participated in a global on-call rotation supporting business-critical applications across international trading hours.
- Served as the India Point of Contact for market data onboarding across **Asia, EMEA and North American exchanges**.

EDUCATION

Bachelor of Computer Science : Shri Ramdeobaba College of Engineering and Management 2018-2022
CGPA : 8.2 / 10
