ABOUT

Software Engineer with 4+ years of experience building scalable distributed systems and REST APIs using Spring Boot, Java, and SQL. Experienced in designing high-throughput backend services, performance tuning, and production support. Strong in multithreading, distributed systems, and optimizing API latency for financial data platforms.

SKILLS

Programming Languages :	Java, Python, SQL, C++.
Frameworks & APIs:	Spring Boot, Spring Data JPA, Hibernate, REST APIs, JSON.
Backend & Systems :	Microservices, Multithreading, Distributed systems, Docker, Kafka.
Databases & Tools :	Unix/Linux, GIT, JIRA, CI/CD, MongoDB, Sybase, MSSQL.
Core Concepts :	Data Structures, Algorithms, Object Oriented(OOPs), System Design.

EXPERIENCE

Morgan Stanley <i>Software Engineer II (Associate)</i>	<i>Mumbai, Maharashtra</i> March 2025 - present
--	--

- Built Spring Boot microservices handling 30M+ events/day via Kafka + REST APIs, improved p95 latency by 60% using async processing + connection pooling.
- Built and maintained REST APIs + Backend services integrating multiple internal / external data sources, ensuring reliable data flow for downstream microservices.
- Optimized Spring Boot services for burst traffic by tuning thread pools, connection pools, and async processing improving API response time and system stability
- Owned production services end-to-end, including deployment validation, debugging, incident resolution, operational monitoring, and production stability improvements.
- Collaborated with cross-functional teams and downstream application owners to design reliable service integrations and scalable data flows.
- Received Excellence Award for rapid root-cause analysis and resolution of a critical production incident during a high-impact live event.

Morgan Stanley via Accolite Digital <i>Senior Software Engineer</i>	<i>Mumbai, Maharashtra</i> January 2022 - March 2025
---	---

- Developed Java backend data processing modules using Java + SQL within ETL workflows, focusing on scalability, reliability for high-volume financial data.
- Automated batch jobs and wrote custom Java / SQL components to reduce manual intervention, improving operational efficiency of downstream microservices.

PROJECTS

Backend REST API Market Data service : (Java, Spring Boot, Postgres, Docker)

- Built REST APIs for user auth, market data CRUD, instrument watchlist, real time price update and history.

Low-Latency Event Processing System : (Java / Python)

- Developed an event-processing system supporting high-throughput ingestion and concurrent message handling.

EDUCATION

Bachelor of Computer Science : Shri Ramdeobaba College of Engineering and Management CGPA : 8.2 / 10	2018-2022
